Read the following information carefully and answer the given questions.

The first American stock exchange originated in 1792 when 24 brokers wrote and signed the Buttonwood Tree Agreement. The agreement was drafted in response to the lack of organization that plagued the colonial economy. It was the first attempt to regulate the American market. The futures or commodities exchange was a separate trading platform that emerged from the need for regulated trading practices in agricultural communities. This market would not be standardized until 1848 when the Chicago Board of Trade was founded. The futures market facilitates the trade of contract agreements that guarantee the buyer a price for future delivery of goods. Although in many ways, the futures market was more stable than the stock market, early investors were more skeptical of the futures market primarily because it was a ripe environment for speculators to trade and sell. In the 19th century, investors looked down on futures traders, viewing them as market manipulators, who engaged in wanton speculation. These investors did not realize that similar criticisms were levied against the stock market when it was first established in the United States. At the stock market's inception, wild speculation and price gouging ran rampant in the US economy. Ironically, the early agrarian futures contracts were crucial in maintaining the stability of the US market economy and were specifically designed to reduce the risk for producers. In fact, the very speculators who were so feared by 19th-century investors actually made the market more efficient and kept prices stable. Futures contracts were standardized as to the quantity, quality, location and time of delivery for each commodity that was bought or sold. Both the standardized nature of futures contracts and the haggling over price by speculators, investment risk, guaranteed that the futures contracts would be bought and sold at fair prices. It was only in the 20th century that investors began to understand how the standard mechanisms of the futures markets could also serve the stock market.

Questions: No

Question Numbers : (156 to 160)

Question Label : Comprehension

Read the following information carefully and answer the given questions.

The first American stock exchange originated in 1792 when 24 brokers wrote and signed the Buttonwood Tree Agreement. The agreement was drafted in response to the lack of organization that plagued the colonial economy. It was the first attempt to regulate the American market. The futures or commodities exchange was a separate trading platform that emerged from the need for regulated trading practices in agricultural communities. This market would not be standardized until 1848 when the Chicago Board of Trade was founded. The futures market facilitates the trade of contract agreements that guarantee the buyer a price for future delivery of goods. Although in many ways, the futures market was more stable than the stock market, early investors were more skeptical of the futures market primarily because it was a ripe environment for speculators to trade and sell. In the 19th century, investors looked down on futures traders, viewing them as market manipulators, who engaged in wanton speculation. These investors did not realize that similar criticisms were levied against the stock market when it was first established in the United States. At the stock market's inception, wild speculation and price gouging ran rampant in the US economy. Ironically, the early agrarian futures contracts were crucial in maintaining the stability of the US market economy and were specifically designed to reduce the risk for producers. In fact, the very speculators who were so feared by 19th-century investors actually made the market more efficient and kept prices stable. Futures contracts were standardized as to the quantity, quality, location and time of delivery for each commodity that was bought or sold. Both the standardized nature of futures contracts and the haggling over price by speculators, investment risk, guaranteed that the futures contracts would be bought and sold at fair prices. It was only in the 20th century that investors began to understand how the standard mechanisms of the futures markets could also serve the stock market.
