Sol. "The Indian Space Research Organisation (ISRO) came tantalizingly close to creating history in the early hours of September 7. The robotic lander Vikram followed the predetermined descent trajectory and came just within 2 km of the lunar surface before contact was lost. While it is unfortunate that the lander failed to safely touchdown, it is apt to remember that ISRO was attempting powered landing for the first time. To put it in perspective, there have been 38 attempts so far by other countries to land a rover on the moon and have succeeded only a little more than half the time. This April, Israel's Beresheet lunar lander crashed to the lunar surface. But early January this year, China's Chang'e-4 touched down on the lunar far side and deployed the Yutu-2 rover to explore the South Pole-Aitken Basin. In Vikram, the velocity was successfully reduced from about 6,000 km per hour at the start of the descent at 35 km altitude to a few meters per second before communication snapped." Hence, the correct order is **BDCAEFG**.
